CASE STUDY:

Case Presentation

Meet Henry, a castrated, adult Persian cat.

Henry presented with severe pruritus, crusts, exudate, ulcerations mainly isolated to his head and neck.

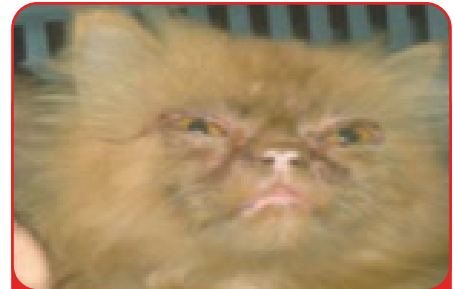

Course of Treatment

- Henry was constantly undergoing some form of treatment including povidone iodine, topical antibiotics and corticosteroids, oral antibiotics and injectable steroids. But the treatments never worked well or for long.
- The attending veterinarian worked with a Royal Canin District Manager, and put Henry on Royal Canin Feline HYDROLYZED PROTEIN HP diet.
- Within just 30 days, Henry looked like a completely different cat!

Outcome of Treatment

BEFORE

AFTER

Royal Canin Feline HYDROLYZED PROTEIN HP proved to be the right choice for Henry for a variety of reasons:

- Veterinary-exclusive dry cat food for adult cats with food sensitivities.
- Highly palatable.
- Formulated with hydrolyzed soy proteins.
- Composed of low molecular weight peptides that are absorbed in the digestive tract with a reduced risk of triggering an immune reaction.
- Optimal amounts of B vitamins and amino acids to reinforce a cat's skin barrier.
- Omega-3 fatty acids EPA and DHA help promote healthy skin and coat.
- Exclusive blend of fibers help support healthy digestion in cats prone to digestive upsets, including diarrhea.
- Made with strict manufacturing procedures to help avoid cross contamination.
- Long-term solution for cats with food allergies and intolerances.
