Tailored nutrition to support your diagnosis.

CASE STUDY:

Case Presentation

Meet Tootsie, a 10-year-old, intact female, medium size mixed breed dog.

Tootsie was released to the Edgerton Veterinary Hospital after her elderly owner struggled to care for her. She presented with a severe skin infection that had been troubling her for over six months.

Course of Treatment

Initially, Tootsie had very little hair at all. Her care team started her on an antibiotic, antifungal, Royal Canin® Canine Skin Support and a low-dose steroid. She also received medicated baths twice weekly.

Why choose Royal Canin® Canine Skin Support?

This limited-ingredient formula contains an exclusive complex including vitamin C and taurine to support healthy skin generation in adult dogs and puppies. Optimal amounts of B vitamins and amino acids reinforce a dog's skin barrier. High levels of EPA and DHA omega-3 fatty acids promote healthy skin and a shiny coat. The highly palatable formula is designed to nourish dogs with skin irritations, helping them to live a magnificent life.

Outcome of Treatment

Tootsie tolerated her new diet well, which helped improve her hair quality and contributed to the rapid resolution of her severe skin infection. In just two months, the transformation has been jaw-dropping—Tootsie's shiny black coat is making a comeback, and her clinical symptoms have completely resolved.*

BEFORE

AFTER 60 DAYS

CANINE SKIN SUPPORT BENEFITS

SKIN SUPPORT

Synergistic action of the exclusive complex helps support healthy skin cell generation.

EPA and DHA

Eicosatetraenoic and docosahexaenoic acids are long chain omega-3 fatty acids that promote healthy skin and coat.

SKIN BARRIER

Formulated to support the skin's natural protective barrier for optimal skin health.

ANTIOXIDANT COMPLEX

A synergistic complex of antioxidants to support cellular health.
